Subject Westwood Chemical

Hi Dilshad, and Happy Holidays.

As we discussed yesterday, and at your request, I have prepared this e-mail to document my evaluation of the soils investigation you conducted, and soil analytical data generated through that investigation, at the Westwood Chemical site in lower New York State.

In my opinion the investigation on-site, centering on the area of stressed vegetation, was completely adequate to evaluate the horizontal and vertical extent of the target metals in the shallow subsurface soils. Additionally, based upon comparison of the analytical data generated with the NYSDEC Technical and Administrative Guidance Memorandum for heavy metals (TAGM 4064 Heavy Metal Table), I conclude that this site is not a candidate for an active soils removal.

hope this helps close your file. Enjoy the upcoming holidays, and be safe.
